During the past decade,
DiLX has become the long-term,
strategic, end-to-end innovation partner
to some of the world's largest supply chain
management companies and related software
vendors around the globe.

As the technology partner, DiLX is guiding these
organizations during their digital transformation
journeys. The solutions have optimized their
total cost of innovation and provided them
with significant competitive advantages.

WHAT DEFINES US

The legacy of working in 5 continents serving the entire Supplychain eco-system over the last 20 years.

Our team has worked with some of the biggest names in the industry.

Our solutions are creating sustainable growth and smarter eco-systems for the Transport & Logistics companies.

We create end-to-end customer experiences

Our domain knowledge, experience and IT expertise help shape customer's core business processes at strategic, tactical and operational levels.

SERVICES

Efficiency Quicks Scan	Supply Chain Consulting	Legacy Migration	Development as a Service (DaaS)	Intergration

Software Development as a Service (SDaaS)

IT is considered the change agent when it comes to transformation of end user experience, creation of new revenue streams or getting the business future ready. DiLX helps its customers in their PLM transformational journey through Digital PLM and Industry 4.0, allowing our customers to achieve faster time to market and deliver Next Gen products.

> Product conceptualization
> Usability engineering
> Prototyping & development
> Integration & Migration
> Quality & Security analysis
> Maintenance & Support

Legacy Migration

Upgradation of the applications to new technology keeps the IT applications alive. Because of the everchanging innovation, ventures need to continually modernize or move the applications to meet the changing business needs. We understand the need for this change and can help you redesign your frameworks and applications to increase the business value.

> Assessment and Planning Services
> Technology Migration and Modernization Services
> Legacy to Cloud Migration Services
> Data Migration Services

Integration

Integrating various business critical enterprise applications can be a complex and time consuming project on its own. Each application that relies on data from other sources requires secure and stable communications which speak the same language. Over the past decades the team of DiLX has integrated thousands of business critical applications around the globe. Therefore the integration technologies are imbedded within the core of DiLX DNA.

> Middleware's
> API's
> SOAP
> REST

Supply Chain Consulting

Our industry experts help you to plan, conceive, incorporate, build, augment and meet your software needs. Our experienced and capable consultants understand how to identify your challenges and create a solution around them. We collaborate with you on your timeline to integrate and centralize your data, streamline your procedures, and give important visibility to your portfolio.

> Business vision
> AS-IS to TO-BE analysis
> Strategic visioning exercises
> Concept generation – Brainstorm workshops
> IT strategy & Roadmap
> Implementation plan & Budgeting

Efficiency Quick Scan

The objective of quick scans is to identify the gaps and understand the ways to increase efficiency, reduce cost and achieve customer satisfaction. The misconception of long and expensive analysis and high investments, prevent managers of putting this in practice. We bring the simplest way to identify the inefficiencies in the business process and select them for optimization.

> Determine scope performance scan
> Collect performance data
> Analyze causes for under performance
> Elaborate performance improvement plan
> Implement performance improvement plan

PRODUCT ENGINEERING
TIME TO MARKET = TIME TO BENEFIT

We provide services for entire product lifecycle, starting with conceptualization, which is the most critical phase for determining product vision and roadmap, the delivery phase, and further support to ensure it is geared for long-term performance. Speed and agility are the keys to sustainable software product engineering. We help unleash intelligent enterprise with the help of innovation and emerging technology.
